Rayen Boussaidi

+216 28 547 723 | boussaidirayen244@gmail.com | linkedin.com/in/rayen-boussaidi-786527286 | Ariana, Tunisia

TECHNICAL SKILLS

Cloud & DevOps: OpenStack (Nova, Neutron, Cinder), OpenNebula, AWS (EKS, ECR, RDS, S3, ALB, CloudFront), Kubernetes, Docker, Helm, Terraform, Argo CD (GitOps), CI/CD Pipelines

Networking: VLAN Architecture, Inter-VLAN Routing, DHCPv4, VPN, SSH, QoS, Firewall Management

Systems: Linux Administration (Ubuntu, Red Hat), Windows Server, MySQL, Zabbix, Grafana, Prometheus, Graylog

Development & Tools: Java, Spring Boot, Angular, Docker, Git, Jira, Python (automation scripts)

CERTIFICATIONS

AWS Solutions Architect (Internal Training Certificate) — *Smartovate* Aug. 2026
AWS Cloud Quest: Cloud Practitioner — *Amazon Web Services (AWS)* Apr. 2026
CCNA: Switching, Routing & Wireless Essentials — *Cisco*Jul. 2025 – Jul. 2028
CCNA: Introduction to Networks — *Cisco*May 2023 – Apr. 2026

EDUCATION

École Supérieure Privée d'Ingénierie et de Technologies — ESPRIT *Ariana, Tunisia*
Engineering Degree in Cloud & IT Infrastructure Sep. 2024 – Jun. 2027

Institut Supérieur de l'Informatique du Kef *Le Kef, Tunisia*
Bachelor's Degree in Computer Systems, Networking & Telecommunications Sep. 2021 – Jun. 2024

EXPERIENCE

Cloud Infrastructure & DevOps Engineering Intern | AWS, Terraform, Kubernetes, Helm, Argo CD Jun. 2026 – Aug. 2026
Smartovate*United Kingdom (Remote)*

- Containerized a 5-service healthcare microservices application (Spring Boot, Angular) and deployed it to Amazon EKS via private Amazon ECR repositories.
- Provisioned AWS infrastructure (VPC, EKS cluster, IAM roles, node groups) with Terraform, integrating Amazon RDS MySQL, Redis, and S3 storage secured with IRSA.
- Built CI/CD pipelines with GitHub Actions (OIDC-based AWS authentication) and GitOps delivery with Argo CD, authoring Helm charts for all deployments.
- Configured AWS ALB and CloudFront for HTTPS, deployed Prometheus/Grafana monitoring, and resolved IAM, CORS, and JWT issues while tracking work in Jira.

Cloud Infrastructure Intern | OpenNebula, VMware Workstation, Ubuntu, KVM Jul. 2025 – Aug. 2025
Tunisie Telecom*Tunis, Tunisia*

- Identified infrastructure gaps: poor resource utilisation, high maintenance costs, and lack of centralised management.
- Selected OpenNebula as the open-source private cloud solution best suited to the organisation's requirements.
- Configured the environment with VMware Workstation, Ubuntu, an OpenNebula Frontend, and KVM hypervisor nodes.
- Validated deployment via virtual network creation, Ubuntu instance provisioning, and OCR service integration.

IT Infrastructure Intern | Linux, MySQL, VPN/SSH, Zabbix, Grafana, Graylog Feb. 2024 – May 2024
LZ Industrie*Tunis, Tunisia*

- Deployed dedicated servers for electronic label data storage, ensuring high availability across production environments.
- Installed and configured MySQL databases to centralise electronic label records, improving data retrieval efficiency.
- Established VPN and SSH tunnels to secure remote-site-to-HQ communications, eliminating unencrypted traffic.
- Deployed Zabbix, Grafana, and Graylog for proactive monitoring, reducing incident response time across all systems.

Network Infrastructure Intern | VLAN, Inter-VLAN Routing, DHCPv4, QoS, Network Security Jul. 2023
Tunisie Telecom*Tunisia*

- Architected multi-VLAN topologies for secure, segmented communication across the organisation's infrastructure.
- Configured inter-VLAN routing and DHCPv4 servers for streamlined, automated IP address management.
- Applied QoS policies and security best practices, delivering a scalable and resilient network infrastructure.

PROJECTS

Cloud-Native Microservices Deployment on OpenStack & Kubernetes
OpenStack · Kubernetes · Spring Boot · Angular · Docker · Helm · API Gateway

- Provisioned an OpenStack private cloud (Nova, Neutron, Cinder) hosting a self-managed Kubernetes cluster.
- Containerised Spring Boot microservices and Angular frontend with Docker; images stored in a private registry.
- Orchestrated Kubernetes workloads (Deployments, Ingress, HPA) with an API Gateway for centralised service exposure.
